Dear Ms. Phillips:

This letter follows our meeting on Friday, May 10, 1996, during which we discussed the various access restrictions and limitations that exist at the Rocky Flats facility in Jefferson County, Colorado.

The security measures that exist to restrict access to DOE nuclear weapons production facilities, including the Rocky Flats facility (the Facility), are obviously extensive and rigidly enforced, and need not be recited in detail here. It is apparent that there are few, if any, facilities in the country with security measures and access restrictions as onerous as those found at the Facility. It is also relevant that buildings on the Facility are generally farther than one mile from any air space that can be accessed by the general public without restriction or limitation.

After reviewing the limitations and restrictions that exist at this time, for purposes of direct applicability of Regulation 8, Part B, as a matter of independent state authority, the Air Pollution Control Division (APCD) has determined that the Facility is not an area of public access as defined in § 25-7-502(1), C.R.S. This determination does not include any building(s) outside the boundary fence encircling the whole Facility, outside the Buffer Zone. The APCD also notes that open public tours are not offered at the Facility, and that family and friends of persons authorized to enter to the Facility do not themselves have unrestricted access to the Facility. The APCD's determination may change if the relevant restrictions are altered in the future.

Finally, we discussed during our meeting that certain provisions in Regulation 8, Part B, regarding asbestos abatement and building demolition regardless of the area of public access distinction, and there are also federal requirements applicable to
